Features based on speaking rate characteristics are explored with the help of multi-stage and hybrid models
for further improving emotion recognition performance. Proposed spectral and prosodic features are
evaluated on real life emotional speech corpus.

Robust Feature Extraction for Mobile-Based Speech Emotion Recognition System 471 system by a cellular phone has not yet been fully investigated. The essential problem is that in cellular phone based speech emotion recognition the noise characteristics greatly vary with the user's environment.

EEG-Based Emotion Recognition via Fast and Robust Feature Smoothing 5 3.3 Classification Algorithm In this paper, we use SVM as the classifier due to its well-known generalization property. In particular, we use the one-vs-all scheme for multiclass classification of the LIBSVM package [3]. For binary classification, given training samples $\{x_i, y_i\}$

We obtain competitive results in this year's video based emotion recognition sub-challenge using an ensemble of two HoloNet models trained with given data only. Specifically, we obtain a mean recognition rate of 57.84%, outperforming the baseline accuracy with an absolute margin of 17.37%, and yielding 4.04% absolute accuracy gain compared to ...
