Membrane technology covers all engineering approaches for the transport of substances between two fractions with the help of permeable membranes. In general, mechanical separation processes for separating gaseous or liquid streams use membrane technology.

### **Membrane technology - Wikipedia**

Complete modular process systems for distillation, liquid-liquid extraction, solvent recovery, steam stripping, chemical separation & product purification.

### **Modular Construction for the Chemical Processing Industry**

Component-based software engineering (CBSE), also called as component-based development (CBD), is a branch of software engineering that emphasizes the separation of concerns with respect to the wide-ranging functionality available throughout a given software system. It is a reuse-based approach to defining, implementing and composing loosely coupled independent components into systems.

### **Component-based software engineering - Wikipedia**

This article reviews the progress made in CO<sub>2</sub> separation and capture research and engineering. Various technologies, such as absorption, adsorption, and membrane separation, are thoroughly discussed.

### **Progress in carbon dioxide separation and capture: A**

Separation and Purification Technology is a journal dedicated to the dissemination of novel methods for separation and purification in chemical and environmental engineering for homogeneous solutions and heterogeneous mixtures. This includes any separation and/or purification of liquids, vapors and gases, with the exception of methods intended for analytical purposes.
