Narcissistic personality disorder (NPD) is a personality disorder with a long-term pattern of abnormal behavior characterized by exaggerated feelings of self-importance, excessive need for admiration, and a lack of empathy. Those affected often spend much time thinking about achieving power or success, or on their appearance. They often take advantage of the people around them.

Major depressive disorder (MDD), also known simply as depression, is a mental disorder characterized by at least two weeks of low mood that is present across most situations. It is often accompanied by low self-esteem, loss of interest in normally enjoyable activities, low energy, and pain without a clear cause. People may also occasionally have false beliefs or see or hear things that others ...

Context Borderline personality disorder is a severe and chronic psychiatric condition, prevalent throughout health care settings. Only limited effects of current treatments have been documented. Objective To compare the effectiveness of schema-focused therapy (SFT) and psychodynamically based transference-focused psychotherapy (TFP) in patients with borderline personality disorder.

### **Outpatient Psychotherapy for Borderline Personality Disorder**

Medications can play a role in treating several mental disorders and conditions. Treatment may also include psychotherapy (also called "talk therapy") and brain stimulation therapies (less common). In some cases, psychotherapy alone may be the best treatment option.
