A PRECONDITIONING METHOD FOR SHAPE OPTIMIZATION GOVERNED BY THE EULER EQUATIONS  
\* EYAL ARIAN † AND VEER N. VATSA Abstract. We consider a classical aerodynamic shape optimization  
problem subject to the compressible Euler flow equations. The gradient of the cost functional with respect to  
the shape variables is derived with

### **A Preconditioning Method for Shape Optimization Governed**

The characteristics of the implementation, the shape optimization system PICASSO (prototype of interactive  
computer aided structural shape optimization), are discussed using an example.

### **Learning Module 8 Shape Optimization**

Shape optimization relies on genetic algorithms (Gosselin et al., 2009) to explore the space of possible  
shapes. However, since genetic algorithms require many evaluations of the fitness function, a naive  
implementation would be inefficient because each one requires an expensive CFD simulation.

The shape of cover plates that can be used to cover this bar structure will be considered in the next section. 3  
Optimization Problem This section presents the different object functions used for optimizing the shape of  
the cover plates that can be attached to a retractable bar structure such as that shown in Figure 2.

### **Shape Optimization of Cover Plates for Retractable Roof**

Shape optimization is widely used in practice. The typical problem is to find the optimal shape which minimizes a certain cost functional and satisfies some given constraints. Usually shape optimization problems are solved numerically, by some iterative method. But also some gradient information is needed.
